

**PLASMA
ASSISTED
TECHNOLOGIES**

VOLUME 3

IGOR MATVEEV

CONTENTS

Preface	3
Authors	4
CHAPTER 1. Plasma-assisted disposal of sewage sludge (<i>Igor Matveev, Serhiy Serbin, Tamara Shevchenko, and Andrey Shevchenko</i>)	14
1.1. Introduction (<i>Igor Matveev</i>)	17
1.2. Sewage sludge characteristics (<i>Tamara Shevchenko and Andrey Shevchenko</i>)	18
1.2.1. Pollutants in sewage sludge	21
1.2.2. Energy potential of sewage sludge	22
1.2.3. Plasma gasification of sewage sludge	24
1.2.4. Challenges and considerations	25
1.3. Sewage sludge dewatering (<i>Tamara Shevchenko, Andrey Shevchenko</i>)	26
1.3.1. Effectiveness of dewatering technologies	28
1.3.2. Selecting dewatering equipment	28
1.4. Sewage sludge-to-power (<i>Igor Matveev, Serhiy Serbin</i>)	30
1.5. System for plasma-assisted treatment of sewage sludge (<i>Igor Matveev, Serhiy Serbin</i>)	35
1.6. New combined cycle gas turbine system for plasma-assisted disposal of sewage sludge (<i>Igor Matveev, Serhiy Serbin</i>)	41
1.7. Plasma-assisted gasification of sewage sludge for hydrogen production (<i>Igor Matveev, Serhiy Serbin</i>)	49
1.8. Sewage and wastewater treatment in arctic zones (<i>Igor Matveev, Maksym Matveev</i>)	53
1.8.1. Key challenges in arctic wastewater treatment	53
1.8.2. Environmental restrictions and regulations	57
1.8.3. Technological solutions and best practices	62
1.8.4. Best practice existing solutions for different sites	63
1.8.5. How Anchorage's wastewater treatment differs from mainland plants	67
1.8.6. Advantages of plasma gasification for arctic waste treatment	68
References	71

CHAPTER 2. Boron nitride nanotubes fundamentals of formation in ICP/RF plasma technology, equipment, market (*Igor Matveev, Serhiy Serbin, and Yuri Barsukov*)

1.2 Investigation of the boron particles behavior in ICP/RF plasma (<i>Igor Matveev, Serhiy Serbin</i>)	78
2.1.1. Introduction	81
2.1.2. Boundary conditions and mathematical modeling	82
2.1.3. Results and discussion	87
2.2 Investigation of the carbon particles behavior in ICP/RF plasma (<i>Igor Matveev, Serhiy Serbin</i>)	91
2.2.1. Boundary conditions for the mixing chamber with one feeding channel	91
2.2.2. Results and discussion	92
2.2.3. Boundary conditions for the mixing chamber with two feeding channels	98
2.2.4. Results and discussion	99
References to 2.1–2.2	106
2.3 Quality physical model of boron nitride nanotubes formation in ICP/RF plasma (<i>Igor Matveev</i>)	108
2.3.1. Introduction	108
2.3.2. Quality physical model	110
2.3.3. Scalability and efficiency	113
2.3.4. Quenching rate	114
References to 2.3	115
2.4 Boron nitride nanotubes: review of plasma aided technologies, equipment and market (<i>Igor Matveev</i>)	116
2.4.1. Introduction	116
References to 2.4	123
2.5 Boron nitride nanotube precursor formation and nitrogen molecule fixation during high temperature synthesis (<i>Yuri Barsukov</i>)	124
2.5.1. Introduction	124
Acknowledgement	130
References to 2.5	130

CHAPTER 3. Plasma-assisted ammonia combustion (*Igor Matveev, Serhiy Serbin*)

3.1 Possibilities of plasma combustion of ammonia in air and oxygen	132
3.1.1. Introduction	134

3.1.2. Design scheme of the plasma-assisted combustion system	137
3.1.3. Theoretical studies of ammonia combustion processes	139
3.2 Combustion of ammonia in oxygen	143
3.2.1. The design scheme of the plasma-assisted ammonia combustion chamber	143
3.2.2. Approaches to mathematical modeling	144
3.2.3. Theoretical studies of ammonia combustion processes	145
3.3 Combustion of ammonia in air	150
3.3.1. The design scheme of the combustion chamber and approaches to mathematical modeling	150
3.3.2. Investigations of ammonia-air combustion processes	151
3.4 The efficiency of gas turbine units with a plasma-chemical stabilizer operating on ammonia	157
3.4.1. The scheme of a gas turbine unit and approaches to modeling	157
3.4.2. Investigation of the efficiency of the gas turbine cycle	158
References	165

CHAPTER 4. Optimization of gas composition for plasma chemistry (*Igor Matveev, Serhiy Serbin*)

4.1 Argon as the plasma gas	170
4.1.1. Introduction	170
4.1.2. Determination of parameters for a plasma torch operating on pure argon	172
4.2 3D Calculations of MgO and C particle heating in a plasma torch mixing chamber operating on argon	173
4.2.1. Geometric features of the mixing chamber	173
4.2.2. Features of mathematical modeling	174
4.2.3. Calculation results for argon flow rate of 2.1 g/s	175
4.3 Calculation results for an argon flow rate of 4.0 g/s	181
4.3.1. Results of plasma jet propagation in a mixing chamber without MgO and carbon supply	182
4.3.2. Results of plasma jet propagation in a mixing chamber with MgO and carbon supply	184
4.4 Calculation results for particle heating with an argon flow rate of 2.1 g/s and uncooled mixing chamber walls	187
4.5 Experimental results of the APT-100 plasma system using various gases	192
4.6 Parameter determination for a plasma torch using an argon-helium mixture	198

4.7 3D Modeling of MgO and C particle heating in a plasma torch using an argon-helium mixture	199
4.7.1. Initial data for plasma jet propagation calculations with argon flow rate of 0.15 g/s and helium flow rate of 1.1 g/s	199
4.7.2. Results of calculating the propagation of an argon-helium plasma jet in a mixing chamber without the supply of MgO and carbon	199
4.7.3. Results of calculating the propagation of an argon-helium plasma jet in a mixing chamber with the supply of MgO and carbon	201
4.8 Three-dimensional calculations of the heating process of MgO and C particles in the mixing chamber of a plasma torch operating on helium	206
4.8.1. Initial data for plasma jet propagation calculations with helium flow rate of 1.5 g/s	206
4.8.2. Results of calculating the propagation of a helium plasma jet in a mixing chamber without the supply of MgO and carbon	206
4.8.3. Results of calculating the propagation of a helium plasma jet in a mixing chamber with the supply of MgO and carbon	208
4.9 Forecast calculations for heating powders in helium plasma at 40 kW power	211
4.9.1. Calculation of the basic version of the mixing chamber	211
4.9.2. Calculation of a modified mixing chamber	214
4.10 Analysis of the possibilities of replacing solid carbon with a carbon-containing gas	217
References	223

CHAPTER 5. Obtaining electromotive force in one- and two-chamber cells using sodium-containing photoplasma (*Sergey Astashkevich and Anatoly Kudryavtsev*) 225

5.1 Introduction	228
5.2 Model for determining photoplasma parameters	234
5.2.1. Sodium atomic and vapor properties and data	234
5.2.2. Plasma chemistry	235
5.2.3. Resonance radiation transfer	238
5.2.4. Exact solution for the slab	245
5.2.5. Charge transport	248
5.2.6. Density balance equations	250
5.2.7. Electron energy balance equation	252
5.3 Self-consistent determination of parameters of spatially homogeneous photoplasma	254
5.3.1. Iterative finding of plasma parameters	254
5.3.2. Parameters of spatially homogeneous Na–Ar photoplasma	255

5.4 Parameters of spatially non-homogeneous photoplasma in one-sided irradiated slab	267
5.4.1. Gas slab cell and incident radiation conditions	267
5.4.2. Spatial profile of photoplasma parameters	268
5.4.3. Effect of incident radiation density	271
5.5 Photo-EMF in single-chamber gas cell	273
5.5.1. Theoretic consideration	273
5.5.2. Calculation and analysis	278
5.6 Photo-EMF in two-chamber gas cell	286
5.6.1. Introduction	286
5.6.2. Theoretical approach	287
5.6.3. Simulation results	289
5.7. Conclusion	301
Acknowledgment	304
References	304

CHAPTER 6. High concentration nitrogen oxides formation in ICP/RF

plasma (<i>Igor Matveev, Serhiy Serbin, and Anton Zinchenko</i>)	316
6.1. Synthesis of nitrogen oxides in ICP/RF plasma	316
6.1.1. Introduction	318
6.1.2. Modeling results and discussion (<i>Igor Matveev, Serhiy Serbin</i>)	321
References to 6.1	327
6.2 Experimental setup (<i>Igor Matveev, Anton Zinchenko</i>)	328
6.2.1. Introduction	328
6.2.2. ICP/RF plasma torch system APT-100	330
6.3 Intensification of the quenching process using a gas-water plasma reactor (<i>Igor Matveev, Serhiy Serbin, and Anton Zinchenko</i>)	334
6.3.1. Introduction	334
6.3.2. Approach to the design of quenching reactor	336
6.3.3. Mathematical modeling of the flow modifier	336
6.3.4. Experimental investigations	343
References to 6.3	346
6.4 Optimization of the quenching rate using a gas coolant (<i>Igor Matveev, Serhiy Serbin, and Anton Zinchenko</i>)	347
6.4.1. Introduction	347
6.4.2. Experimental investigation of the quenching rate	348
6.4.3. Theoretical investigation of the quenching rate	350

References to 6.4	354
6.5 Optimization of the quenching rate using a recirculated coolant, with an experimental analysis of nitrogen oxides (<i>Igor Matveev, Serhiy Serbin, and Anton Zinchenko</i>)	355
6.5.1. Introduction	355
6.5.2. Experimental setup	356
6.5.3. Experimental determination of the nitrogen oxides value	358
References to 6.5	362
6.6 Comparative analysis of plasma-based and conventional NO _x production technologies (<i>Igor Matveev, Anton Zinchenko</i>)	363
6.6.1. Introduction	363
6.6.2. Overview of nitrogen fixation technologies	364
6.6.3. Selection criteria and standardized comparison	365
6.6.4. Performance enhancement of ICP/RF plasma systems	368
Acknowledgement	372
References to 6.6	372
CHAPTER 7. Plasma technologies: a spectrum of possibilities (<i>Igor Matveev et al.</i>)	375
7.1 A Multi-propellant RF plasma thruster (<i>Igor Matveev, Paolo Gessini, Serhiy Serbin</i>)	378
7.1.1. Introduction	378
7.1.2. Preliminary results and discussion	378
References to 7.1	382
7.2 Plasma torch testing of hypersonic vehicle materials (<i>Stan Bouslog</i>)	384
7.2.1. Introduction	384
7.2.2. Arc-Jet Testing	385
7.2.3. Inductively coupled plasma (ICP) torch testing	386
References to 7.2	390
7.3 Inductively coupled plasma facilities for testing of thermal protection materials (<i>Igor Matveev</i>)	392
7.3.1. Introduction	392
7.3.2. Existing facilities	392
7.3.3. ICP plasma	393
7.3.4. Test facilities	395
References to 7.3	400
7.4 APT testing facilities (<i>Igor Matveev</i>)	401

7.5 Thermodynamic analysis of a single-stage carbon black plasma synthesis from carbonaceous waste (<i>Igor Matveev, Serhiy Serbin</i>)	404
7.5.1. Introduction	404
7.5.2. Initial conditions and calculation method	405
7.5.3. Modeling results and discussion	406
References to 7.5	412
7.6 Numerical simulation of carbon black plasma synthesis from wood sawdust (<i>Igor Matveev, Serhiy Serbin</i>)	413
7.6.1. Introduction	413
7.6.2. Plasma reactor for carbon black synthesis. initial data	415
7.6.3. Mathematical modeling	415
7.6.4. Modeling results and discussion	419
References to 7.6	424
7.7 Liquid fertilizer production technology: plasma-assisted synthesis (<i>Igor Matveev, Svetlana Matveyeva</i>)	426
7.7.1. Introduction	426
7.7.2. Plasma-assisted fertilizer synthesis	426
7.7.3. Reactor design and functionality	427
7.7.4. Technical approach	429
7.7.5. Task descriptions	429
7.7.6. Related R&D	430
7.7.7. Experimental development and optimization	432
7.7.8. Applications and future prospects	432
7.8 Application for water purification (<i>Igor Matveev</i>)	433
7.8.1. Water purification via plasma technology	433
7.8.2. Urinal waste processing for space missions	434
7.8.3. Key advantages of the micro-torch system	435
7.8.4. Potential implementations	436
References to 7.7 - 7.8	436
7.9 Development of the plasma brush for green mussel processing	437
7.9.1. Optimization of plasma parameters for mussel shell opening	437
7.9.2. Implementation in an automated production line	438
7.9.3. Advantages of plasma technology in mussel processing	439
Reference to 7.9	439

7.10 Plasma for space technology applications in human spaceflight (Annie Meier, Kenneth Engeling, and Ray Pitts)	440
7.10.1. Resource recovery from logistical trash/waste during crewed space exploration	441
7.10.2. Plasma integrated into space crop production	453
7.10.3. Plasma treatments of gas streams for space applications	455
Appendix to 7.10	457
References to 7.10	457

CHAPTER 8. Toward high-power RF plasma systems: balancing performance and thermal limits (Igor Matveev, Serhiy Serbin)

Introduction	466
8.1 A multi-torch RF plasma system as a way to improve temperature uniformity for high power applications	466
8.1.1. Introduction	466
8.1.2. Initial and boundary conditions	467
8.1.3. Modeling results and discussion	468
8.2 High power RF plasma systems for the elevated pressure applications. Single torch vs multi-torch design	476
8.2.1. Introduction	476
8.2.2. Main Parameters of the APT-250 RF plasma system	476
8.2.3. Forecasting the main parameters of the APT-750 RF plasma system	477
8.2.4. Modeling results	479
References to 8.1–8.2	482
8.3 Key selection criteria and analysis of plasma source parameters for modern industrial plasma chemical technologies (Igor Matveev)	484
8.3.1. Introduction	484
8.3.2. Defining the key parameters for PAMR	485
8.3.3. Selection of plasma sources	485
8.3.4. Scaling RF plasma power beyond 1 MW	487
8.3.5. Power density	488
8.3.6. Inductor design	488
References to 8.3	490

CHAPTER 9. ICP and μ W plasma efficiency: business implications for Industrial innovations (Igor Matveev)

9.1 Understanding power distribution in an inductively coupled plasma (ICP) generator	494
9.1.1. Introduction	494
9.1.2. Power flow in an RF plasma system	494

9.1.3. Types of power in an ICP system	496
9.1.4. Final plasma torch power (useful thermal power) and efficiency measurement	497
9.1.5. Grid-to-plasma efficiency breakdown for RF plasma at 250 kW – 1 MW power range	497
9.2 Microwave (μ W) plasma systems	501
9.2.1. Introduction	501
9.2.2. Efficiency	504
9.2.3. Industrial-grade high-efficiency power supplies	506
9.2.4. Key efficiency stages – grid-to-plasma	508
9.3 Comparison of μ W plasma vs. ICP plasma for 250 kW – 1,000 kW power range	509
9.3.1. Expanded analysis of plasma gases and gas composition flexibility	511
9.3.2. Case studies	514
Acknowledgement	517
References	517
CHAPTER 10. Plasma treatment of cathode materials – from salt-based crystallization to solid-state healing (<i>Igor Matveev, Serhiy Serbin</i>)	519
10.1 Plasma-assisted synthesis of lithium-based cathode materials from salt solutions	521
10.1.1. Atmospheric composition and pressure considerations	523
10.1.2. Evaluation of plasma and furnace heating efficiency for salt solutions ...	524
10.1.3. Plasma-driven crystal quality: a decisive advantage	525
10.1.4. Technology distinction and prior development	526
10.1.5. Need for scale-up: transition from laboratory-scale to industrial plasma systems	526
10.1.6. Market demand and economic drivers	527
10.1.7. Next steps: modeling particle behavior in plasma	528
10.1.8. Energy-efficient evaporation of multicomponent salt solutions in a nitrogen plasma environment	528
References to 10.1	536
10.2 Plasma-based healing of lithium cathode materials – scientific foundations of a breakthrough technology	538
10.2.1. Scientific novelty: beyond the known horizons	538
10.2.2. Scientific basis and supporting literature	541
10.2.3. Heating of powders in nitrogen plasma	543
References to 10.2	546
